Re: 2007/2008 Annual Report on Hazardous
Materials Emergency Response Team Activities

Attached is the Annual Report on Hazardous Materials Response Team activities for FY 2007/2008. Responses included in this annual summary are for the Santa Ana, Santa Margarita and Whitewater Rivers and the respective Regional Boards. Should you require clarification or further information, please contact us at your convenience.

Respectfully submitted,

Kyle P. Ferris
Fire Apparatus Engineer/Hazmat Specialist

5.0 Municipal Employee Training	5
6.0 Prevention Measures	6
7.0 Incident Summary	7

1.0 Summary

This report addresses the Riverside County Fire Department's Hazardous Materials Response Team activities for the period of July 1, 2007 to June 30, 2008. The report details program development, public outreach efforts, municipal staff training, runoff prevention measures, and call summary. Hazardous Material Response Team activities included in this report were actual hazardous material releases that potentially threatened the watersheds of the Santa Ana, Santa Margarita, and Whitewater Rivers overseen by the Riverside County Flood Control and Water Conservation District.

2.0 Introduction to the Hazardous Materials Response Team

The 2007/2008 Annual Report on Hazardous Materials Emergency Response Team Activities summarizes responses to environmental emergencies for the purpose of controlling the release of toxic materials and minimizing the impact on public safety and the environment. The Riverside County Fire Department Hazardous Materials Response Team, established in 1986, continues with its mission of providing service within Riverside County through a partnership program that combines the efforts from Cal Fire/Riverside County Fire Department and the Hazardous Material Branch of Riverside County Environmental Health.

The Hazardous Materials Response Team responds to environmental emergencies within the County of Riverside and provides mutual aid to Imperial County. An additional responsibility of the HMRT is oversight and coordination of the NPDES Storm Water Discharge Permit for Riverside County Fire Department facilities. The HMRT oversees maintenance and implementation of the Storm Water Pollution Prevention Program (SWPPP) for county fire stations and facilities which includes the implementation of Best Management Practices (BMPs) municipal employee training and Riverside County Fire Fighting Agencies BMPs.

Riverside County Fire Department is one of the largest fire departments within California in both geographic coverage and firefighting personnel, providing emergency service to Riverside County and the cities of Banning, Beaumont, Calimesa, Coachella, Desert Hot Springs, Indian Wells, Indio, La Quinta, Moreno Valley, Palm Desert, Perris, Rancho Mirage, San Jacinto, and Temecula. The Riverside County Fire Department operates 96 fire stations with over 1200 employees.

3.0 Program Management and Development

With the continued development and population growth of Riverside County, total numbers of emergency incidents are increasing. Riverside County Fire Department is committed to meeting the demand for public service and has developed plans and contingencies for continued expansion through placement of new facilities and additional personnel. With the increase in the total number of emergency incidents, there is a related increase in Hazardous Materials related incidents. The Hazardous Material Response Team is meeting this increase in service with the following program developments:

- FY 2001/2002, this year saw the development of two dedicated Hazardous Materials Response Teams, consisting of five Firefighter/Hazardous Material Technicians per team. Team One is located in Winchester, CA and Team Two is located in Palm Desert, CA.
- FY 2002/2003, the purchase of three new hazardous materials response vehicles, consisting of two support trucks, and a tractor-trailer main unit. The main unit was assigned to Hazmat Team 1 and one support truck is assigned to each team. There have been additional purchases of equipment and monitors to ensure a full compliment of tools for both teams.
- FY 2003/2004, two Mass Decontamination Response Trailers, capable of treating 200 patients per hour, were purchased with grant money and placed in-service for both teams. A change in the designators for the Hazardous Materials Response Teams was made; "Hazmat 1" and "Hazmat 2" became "Hazmat 34" and "Hazmat 81", to reflect the geographic locations of the Hazmat Response teams, improving communications and organization.
- FY 2004/2005, participating fire departments within Riverside County developed Best Management Practices (BMPs) that are intended to be used by fire fighting agencies for urban runoff management. These BMPs are a requirement of the Riverside County Municipal Stormwater permit (section XI.B) adopted by the Santa Ana Regional Water Quality Control Board (SARWQCB). Due to an operational need the two response teams were combined into one team and separated into three locations.
- FY 2005/2006, the Hazardous Materials Response Team was reorganized into two distinct teams, Hazmat 34 at Winchester Fire Station 34 and Hazmat 81 at North Bermuda Dunes Fire Station 81. Daily on duty staff is 10 Hazardous Materials Specialists providing service to the county.

- FY 2006/2007, approximately \$25000.00 was expended on Vetter air bags to replace older complements and add to the capabilities of Hazmat 81. Vetter air bags are a significant tool that can be used to occlude accidental discharges from impacting the storm water system. Further developments, the installation of MDTs (mobile data terminals) in all front line fire equipment, and Riverside County environmental health officer vehicles. This allows for improvements in locating and responding to incidents, orthographic mapping of incidents and integrating technology which the ability to access the Health Department's Business Response Plans. A \$400,000 purchase has been approved to replace the main Hazmat Response Team vehicle at Station 81 and it is scheduled to be placed in service in FY 2007/2008.
- FY 2007/2008, with the growing needs of Hazardous Materials Response, the Hazardous Materials Response Team was granted additional staffing at each station. Winchester Fire Station 34 and Bermuda Dunes Fire Station 81 each have a Paramedic Engine with Hazmat trained people on them. This increased the daily staffing to 16 Hazardous Materials Technicians and Specialist to provide service to the county.

4.0 Public Education

The Hazardous Materials Response Team is available for public education, and dedicates time to provide information and education regarding environmental safety and Storm Water Pollution Prevention. Both teams have participated in public relation and education events during FY 2007/2008 on an average of 1- 2 per month. Hazmat Response Team personnel are made available to provide information and education through direct public contact, and materials. These events have included:

- The Riverside County Fair held annually at Indio, CA.
- Educational presentations at public schools, grades K through 12.
- Safety fairs held at the cities of La Quinta, Hemet, Perris, Moreno Valley, and Temecula.
- Public events within Riverside County.

Public information and education is provided through materials that the Hazardous Materials Response Team hands out during the various events that are attended during the year and information that team members provide during equipment displays.

- "Household Hazardous Waste Collection Site Schedule" (schedule) Riverside County Environmental Health.
- "Household Hazardous Waste" (pamphlet), Stormwater Cleanwater Protection Program.
- "Stormwater Pollution, What You Should Know" (pamphlet) Stormwater Cleanwater Protection Program.
- "Stormwater Pollution, Outdoor Cleaning Activities" (pamphlet) Stormwater Cleanwater Protection Program.
- "Storm Drains Flow directly to our Waterways" (poster) Stormwater Cleanwater Protection Program.

5.0 Municipal Employee Training

Successful Storm Water Pollution Prevention is dependent upon a standard operation policy and effective education of department employees. Team members from the Hazardous Material Response Team are available to train and educate the approximately 1200 Riverside County Fire Department personnel on the Storm Water Pollution Prevention Program and the National Pollution Discharge Elimination System. In previous years, the training was conducted at individual fire stations, or during employee orientation at Clark Training Center.

To comply with NPDES permit requirements for municipal employee training, and to ensure a consistent training program, Riverside County Fire Department produced a video training program that is distributed to all 95 fire department facilities to compliment the SWPPP manuals that are available for reference at the facilities. Employees are encouraged to view the program on an annual basis. The training covers BMPs, (best management practices) that apply to municipal facilities.

Fire Station/Municipal Facility Activities

- Dispensing of Fuel.
- Vehicle and equipment parking and storage.
- Vehicle and equipment maintenance.
- Vehicle and equipment washing and cleaning.

- Leak and spill cleanup.
- Landscape, garden, and general maintenance and cleaning.
- Loading, handling, storage of chemicals, oil, trash, and debris.

6.0 Prevention Measures

Members of the Hazardous Materials Response Team were involved in the development of best management practices (BMPs) that are used by participating Riverside County fire fighting agencies for urban runoff management. These best management practices were a requirement of the Riverside County Municipal Storm Water Permit (section XI.B) adopted by the Santa Ana Regional Water Quality Control Board in 2004.

The Riverside County Fire Chief's Association adopted the fire department activities to provide guidance to firefighting personnel for management of urban runoff. The BMPs, when followed, minimize discharges of runoff to the municipal separate storm sewer system (MS4) associated with firefighting activities such as fire training, emergency scene spills, discharges and firefighting.

The following Emergency and Non-emergency Firefighting Activities were addressed:

- Discharges associated with fire training activities.
- Discharges associated with post-emergency fire fighting activities.
- Discharges associated with activities conducted at fire department facilities.
- Discharges associated with emergency fire fighting activities.
- Stormwater NPDES training of fire department employees.

7.0 Incident Summary

From July 2007 through June of 2008, Hazardous Materials Response Teams, Hazmat 34 and Hazmat 81, responded to a total of **347** hazardous material related incidents. **171** of these incidents were a threat or potential threat to the stormwater system of Riverside County Flood Control and the Santa Ana, Santa Margarita and Whitewater watersheds.

- Santa Ana Watershed 87
- Whitewater Watershed 49
- Santa Margarita Watershed 35
- Total 171

The average length of time spent on a hazardous materials related incident is two hours. Based on **171** flood control related incidents, the Hazardous Materials Response Team provided **342** service hours to the Riverside County Flood Control District.
